

FOR IMMEDIATE RELEASE

Sourcefire Licenses eTelemetry's People Identifying Technology

eTelemetry technology to extend the power of Sourcefire's 3D Enterprise Threat Management solution

Annapolis, MD (May 15, 2007) – eTelemetry today announced the signing of a licensing agreement enabling the use of eTelemetry's patented technology within Sourcefire's 3D *Enterprise Threat Management Solution*. eTelemetry's technology passively identifies the user associated with IP addresses and PCs on a corporate network.

Sourcefire's Real-Time User Awareness™, which leverages the eTelemetry technology, delivers powerful user identification capabilities to speed incident containment, enhance control, eliminate manual efforts and associated costs, and improve security decision-making. A security industry breakthrough, RUA will enable customers to correlate threat, endpoint, and network intelligence with user identity information, equipping them to identify the source of policy breaches, the targets of attacks, and the location of network vulnerabilities while improving audit controls and regulatory compliance.

In addition to licensing to solution providers, eTelemetry makes three plug-and-play appliances that incorporate its people identifying technology. Locate maps people to IP addresses, PCs, and switch ports both in real time and historically. Metron tracks users' bandwidth and employee time spent surfing and chatting. Locate911 automates VoIP phone tracking and e911 compliance. The data from all three products is available via web services and is often used with other applications to solve a specific challenge on the organization's network.

"We are excited that Sourcefire, a true leader in security technology, has chosen eTelemetry," said Ermis Sfakiyanudis, President and CEO of eTelemetry. "Our people identification capability is designed to add value to network security and identity management technology. We add the 'People Layer' to the anonymous network environment."

See demonstrations of eTelemetry's products at Interop Las Vegas in booth #2340.

About eTelemetry

Launched in 2004, eTelemetry, Inc. turns network traffic into business intelligence. Our products provide passive, plug-and-play organizational visibility. This gives business owners, IT management, and security personnel a top-down view of all desktop-computing assets, the people using them, their activities and physical location. For more information, call 888-266-6513 or visit <http://www.etelemetry.com>.
